

Complete Systems

 **AIRCOM**

This is how **we are committed**
to providing you with a
complete system.

We are not just automatic spray guns.

AIRCOM, in collaboration with selected partners, can support you by creating complete spraying systems, designed and developed according to your specific needs.

We can provide turnkey systems that are easy and quick to install, suitable for both integration into existing process lines and stand-alone.

A complete system, ready to use.

PNEUMATIC CONTROL PANELS

With the collaboration of selected partners, we create electro-pneumatic panels for the control of spraying systems, according to customer specifications and in compliance with current regulations.

Our pneumatic panels consist of painted metal or stainless steel panels, including all electrical wiring and pneumatic connections. To accompany the pneumatic panels, we create pneumatic diagrams.

ELECTRICAL CONTROL PANELS

We can supply electrical systems with management PLC, including operator panel, power supply and connections.

The boxes for electrical systems can be supplied in painted metal or stainless steel, according to the specific needs of the customer.

PUMPING SYSTEMS

Depending on the customer's specific needs, we are able to supply a suitable suction pump for liquids, complete with pipes and accessories.

TANKS

Upon customer request, to complete a complete system, we can supply tanks for liquids, customized in size and construction material, according to individual needs.
